Wifi Setup Instructions

Manual Setup Guide

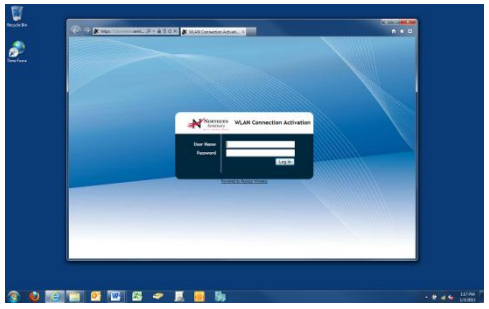
This guide contains instructions for many types of operating systems. Each varies slightly, but the overall instructions are the same. We will use Mac OS X and Microsoft Windows 7 for our examples.

Mac OS

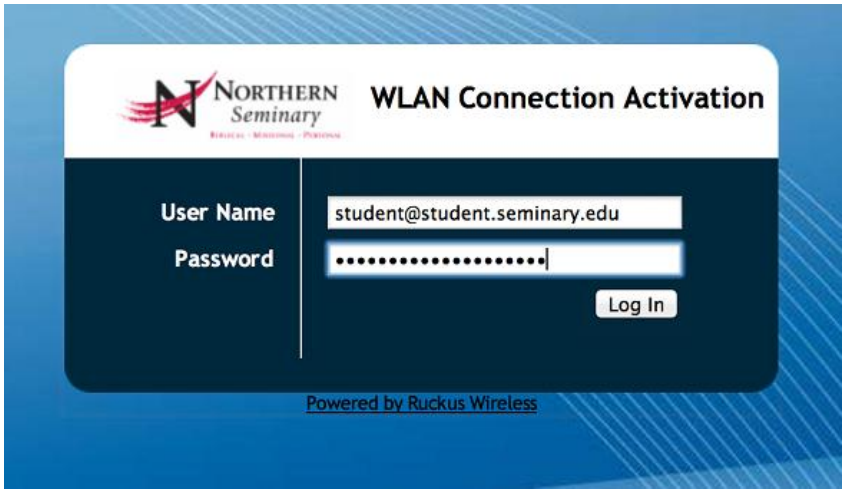
Windows

Navigate to the wifi status icon in your menu or status bar. Connect to "nssetup".

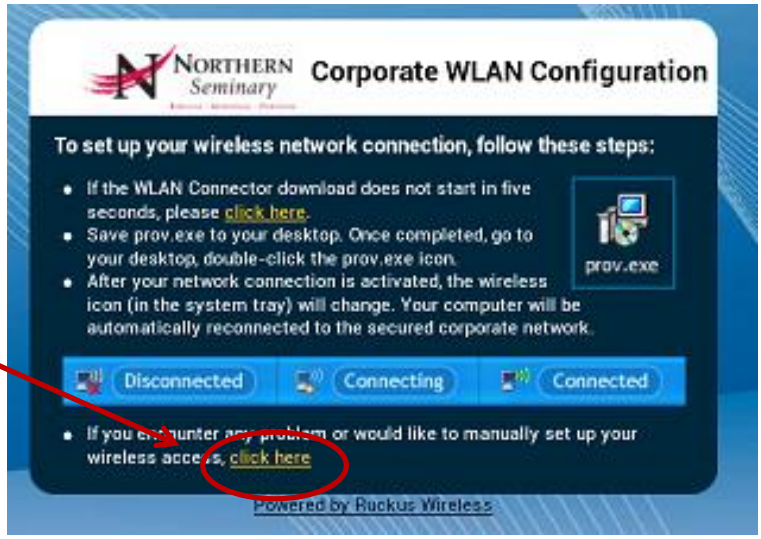
Open up your internet browser. Your browser should automatically redirect you to the wireless activation website. If it does not, simply type in any web address in the address bar. For example, www.seminary.edu.



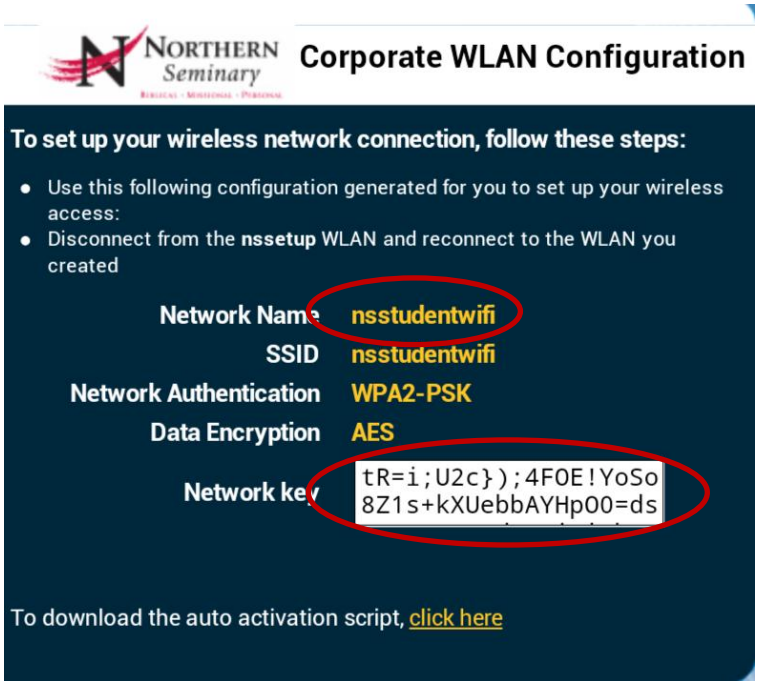
Type in your Northern Seminary login. For example, student@student.seminary.edu, and then enter in your password. Click on "Log In"

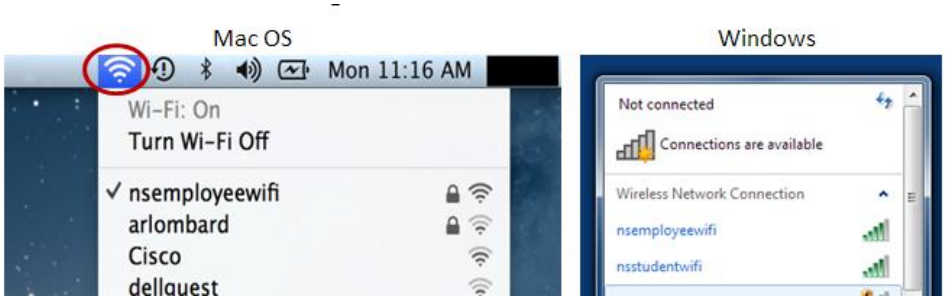


After you login, you will see towards the bottom of the box, you will see a manual setup link. Click on the lower "Click here."



The following webpage will appear which contains the network settings. Make note of the network name and copy the 62 character password to the clipboard. You will need to paste the password in the next step.





Navigate back to your wifi settings and connect to the network name that was specified in the previous step. When you are prompted for a password, please paste the 62 character password from the previous step. You should now be connected to Northern Seminary wifi.
